Landscape of Data Sharing Architectures

(some examples)

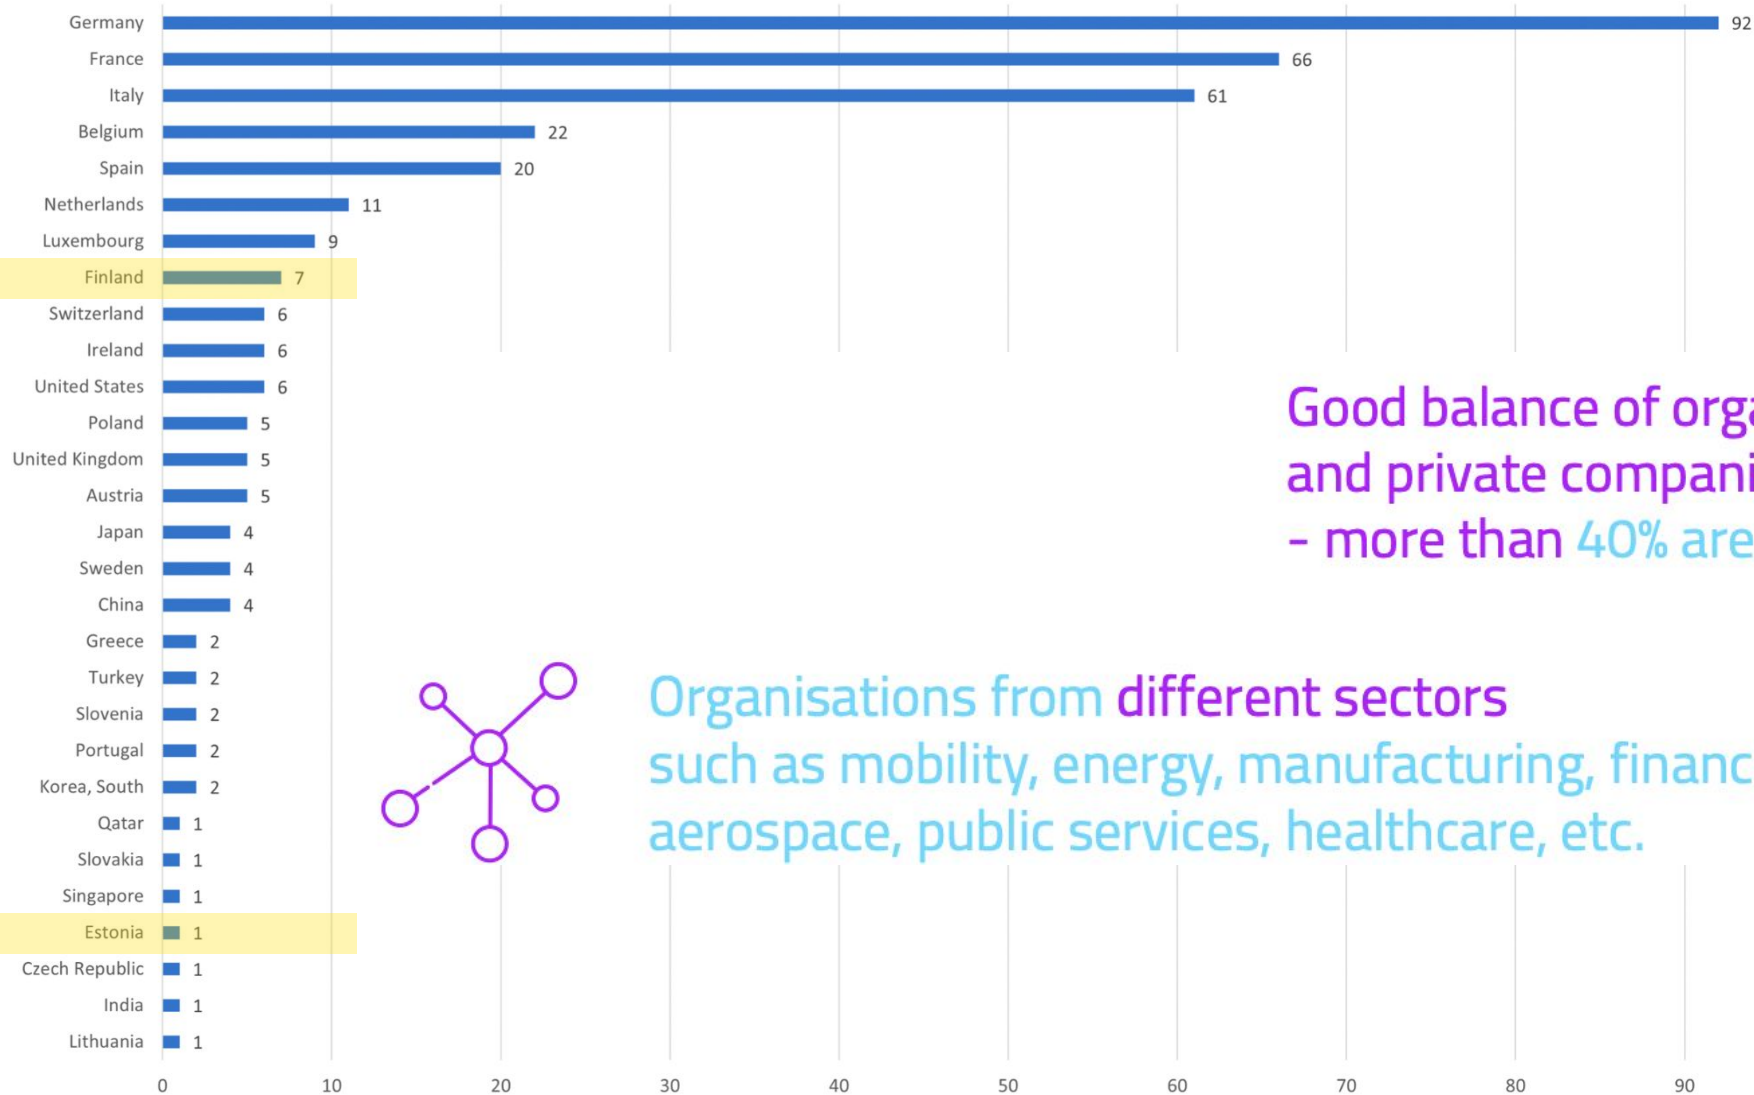

Gaia-X mission

Together we create an open, transparent, and secure federated digital ecosystem, where data and services respond to common rules and can be freely and securely built, collated, and shared.

355 Gaia-X members

Good balance of organisations and private companies
- more than 40% are SMEs

Organisations from different sectors such as mobility, energy, manufacturing, finance, agriculture, aerospace, public services, healthcare, etc.

What Gaia-X is?

Gaia-X is

- > A single point of definition of Gaia-X architecture & rules
- > Making available an open implementation to all
- > A qualification authority for Gaia-X compliance

Gaia-X is NOT

- > A formal standardization body
- > A SW or HW product or cloud platform
- > A runtime implementation of any Gaia-X service

Gaia-X vs. Association

- > Gaia-X project is driven by the Association
- > Gaia-X architecture is developed by the Association members
- > Gaia-X services will not be operated by the Association

(*) AISBL is an independent single point of truth in the determination of a Gaia-X compliancy, but the Association itself will not host or run directly any service. Qualification and compliance will be verified through decentralized mechanisms of digital trust and consensus distributed across the network of Gaia-X nodes (i.e. AISBL stands to Gaia-X like a Registrar to the Internet)

What Gaia-X does?

Specify

- > Architecture Document
- > Trust Framework
- > Policies and Rules, Label Framework Documents

Specs

Develop

- > OSS framework for community work
- > Reference implementation of Federation Services
- > Reference implementation of self regulation Services

Code

Qualify

- > Service qualification Process
- > Service qualification Labelling
- > Service qualification

Labels

Our X-Model

Connecting Data & Infrastructure Ecosystems

Advanced Services

New (Cross-) Sector Innovations / Applications build from service composition.

Data Spaces / Federations

Interoperable & portable (Cross-) Sector data-sets and services.

Data Exchange

Anchored contract rules for access and data usage.
asdsadadads

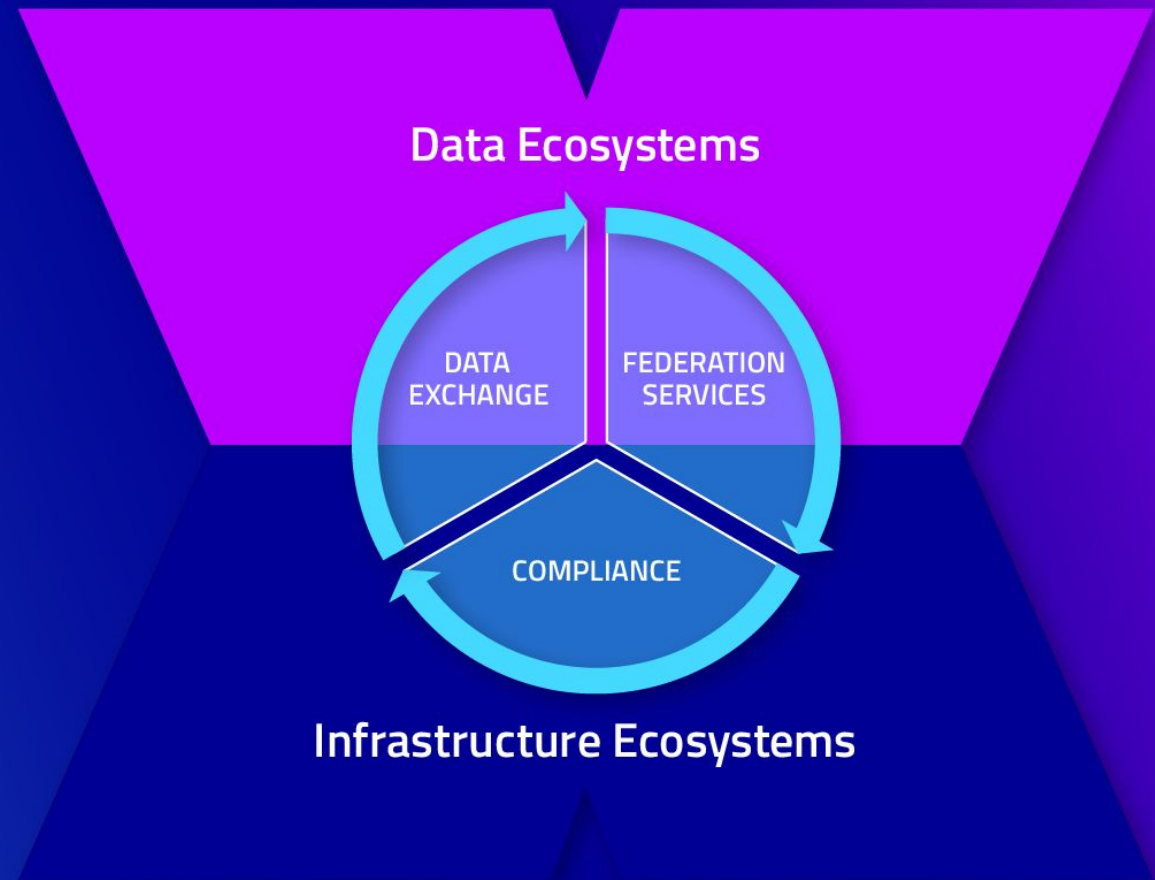

Gaia-X Compliance

Decentralized services to enable objective and measurable trust.

Label framework

Gaia-X and ecosystem specific Labels to ease market adoption through autonomy and self-determination.

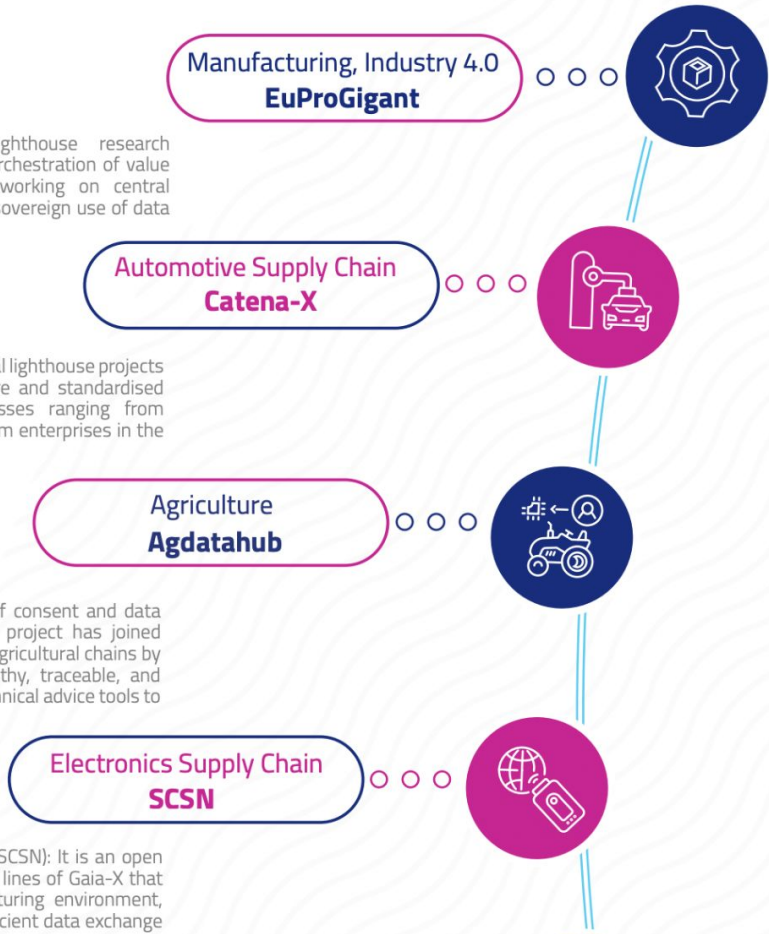

Lighthouse Projects

EuProGigant: Austrian-German lighthouse research project "for calamity avoiding self-orchestration of value chain and learning ecosystems" working on central questions related to the smart and sovereign use of data in manufacturing.

Catena-X: It is one of the first industrial lighthouse projects of Gaia-X. It aims to create a secure and standardised data-based ecosystem for businesses ranging from OEMs, 1st Tier and to small & medium enterprises in the entire automotive value-chain.

AGDATAHUB: A European operator of consent and data exchange platforms, this lighthouse project has joined forces with Gaia-X to create value in agricultural chains by mobilising data intelligence for healthy, traceable, and environmentally friendly food and technical advice tools to farmers.

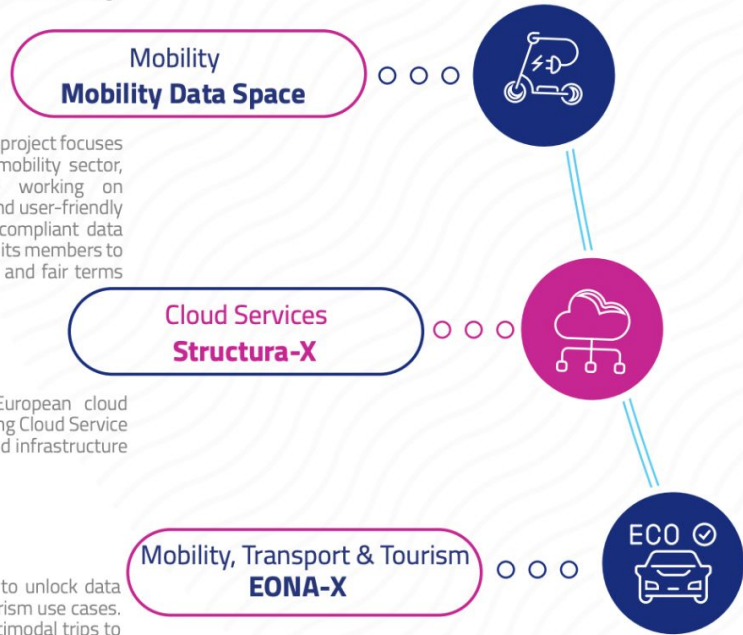

Smart Connected Supplier Network (SCSN): It is an open data lighthouse ecosystem along the lines of Gaia-X that enables data sharing in a manufacturing environment, resulting in fast, safe, secure, and efficient data exchange within the high-tech supply chain.

Mobility Data Space (MDS): The lighthouse project focuses on the sovereign data exchange in the mobility sector, offering an ecosystem for everyone working on innovative, environmentally sustainable, and user-friendly mobility solutions. By facilitating Gaia-X compliant data exchange, the Mobility Data Space enables its members to participate in the data economy on equal and fair terms based on shared European values.

Structura-X: A lighthouse project for European cloud infrastructure endeavours to enable existing Cloud Service and Infrastructure Providers (CSP) data and infrastructure services to be Gaia-X certifiable.

EONA-X: provides a trusted environment to unlock data sets and foster mobility, transport and tourism use cases. A primary focus is the optimisation of multimodal trips to contribute to achieving the zero emission target defined by the EU Mobility Strategy. *A powerful demonstrator was delivered based on real time data coming from real production systems of airline and rail industry*

A lighthouse project for European cloud infrastructure endeavours to enable existing Cloud Service and Infrastructure Providers (CSP) data and infrastructure services to be Gaia-X certifiable.

Gaia-X Finland Hub

Goal: Finland based lighthouse data spaces

About Gaia-X

The goal of Gaia-X is to develop and build a common data infrastructure that allows data to flow or be accessed within the European single market and beyond. The aim is to share data reliably and fairly so that individuals and businesses can unlock its full value and create new services.

Gaia-X Finland, co-ordinated by Sitra, is the national Gaia-X hub in Finland. We work with Finnish companies to seize the opportunities presented by Gaia-X and contribute to co-creating future European data spaces. There are many opportunities for Finnish companies to participate. Come and join the work!
